# Things to Consider Before Buying a Steel Door

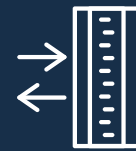

## Jamb

When choosing a steel door, ensure the jamb is sturdy, properly aligned, and made from durable materials. Consider adjustable jambs for easier installation and better fit.

## Panel Design

Select a steel door with panel designs that match your home's aesthetic and architectural style, from simple to ornate options.

## Insulation

For energy efficiency and thermal comfort, choose steel doors with proper insulation, such as a polyurethane foam core. Check the door's insulation rating or thermal performance.

## Hinges

Make sure that the door's hinges are heavy-duty and properly installed for smooth operation.

## Lockset

Choose a steel door with a high-quality lockset for additional security.
